Proposers Day August 8, 2025

# Proposers Day Agenda

Start (ET)	Topic / Speaker		
10:30	WEBINAR CHECK-IN		
11:00	Welcome		
11:00	Neal Oza/MTO Technical SETA		
11:05	Introduction to MTO		
11.05	Whitney Mason, DARPA/MTO Office Director		
11:10	Program Overview		
11.10	Justin Cohen, DARPA/MTO Program Manager		
12:10	Contracting Overview		
12.10	Nestor GomezBello, DARPA/CMO Contracting Officer		
12:25	Introduction to DARPAConnect		
12.23	Sana Hoda Sood, Applied Research Institute		
12:30	BREAK		
13:30	Question & Answer Session		
15:50	Justin Cohen, DARPA/MTO Program Manager		
15:00	ADJOURN		

## **Security Introduction**

Juan Cosme, DARPA/MTO Program Security Representative

## This meeting will be:

## <u>UNCLASSIFIED</u>

- Classified discussions are **not permitted** during this conference!
- Security Topics
  - Security POCs

Program Solicitation (PS) Coordinator / General Contact: HARQ@darpa.mil

**Program Security Representative (PSR) Contact**: Grace 'SAL' Salcedo, Grace.Salcedo.ctr@darpa.mil

**PSR Contact:** Scott Rolston, Scott.Rolston.ctr@darpa.mil

**Security Control Assessor (SCA) Contact**: Andre Nelson, Andre.Nelson.ctr@darpa.mil

#### Note:

If needed, proposer's security team should contact the PSR and SCA through the PS email address, **HARQ@darpa.mil**, to initiate discussions as soon as company decides to propose to PS.

# Proposers Day Agenda

Start (ET)	Topic / Speaker			
10:30	WEBINAR CHECK-IN			
11.00	Welcome

15:00	ADJOURN			

### **Question & Answer Session Guidance**

- Questions must be <u>submitted by 12:30 PM ET</u> for today's Q&A Session
- Submit questions to <u>HARQ@darpa.mil</u>
- Questions not answered in the Q&A Session may be published in the Frequently Asked Questions (FAQ)
  document following today's event
- FAQ document will be posted at: <a href="https://www.darpa.mil/research/programs/HARQ">https://www.darpa.mil/research/programs/HARQ</a>

### Submit Questions to HARQ@darpa.mil

### Dates/Time: All Times are Eastern Time Zone (ET)

- Abstract Due Date: August 28, 2025, at 1:00 p.m.
- Abstract Virtual Q&A Dates: September 4–17, 2025
- Notification of Intent to Propose: October 1, 2025, at 5:00 p.m.
- Question Submittal Closed: October 1, 2025, at 5:00 p.m.
- Proposal Due Date: October 14, 2025, at 4:00 p.m.
- Virtual Oral Presentation Dates: October 22 November 4, 2025
- Estimated Period of Performance Start: February 1, 2026

## Introduction to MTO

Whitney Mason, DARPA/MTO Office Director

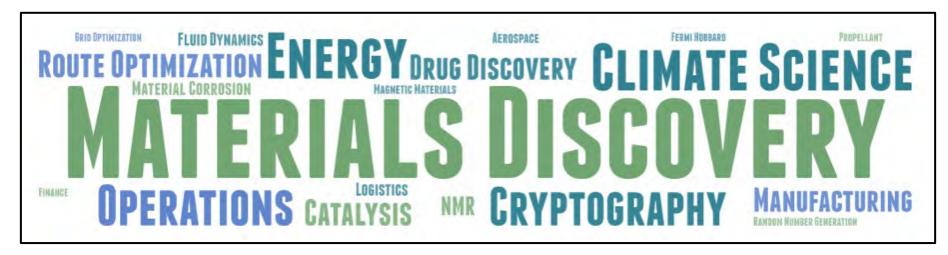

Justin Cohen, Program Manager
DARPA Microsystems Technology Office

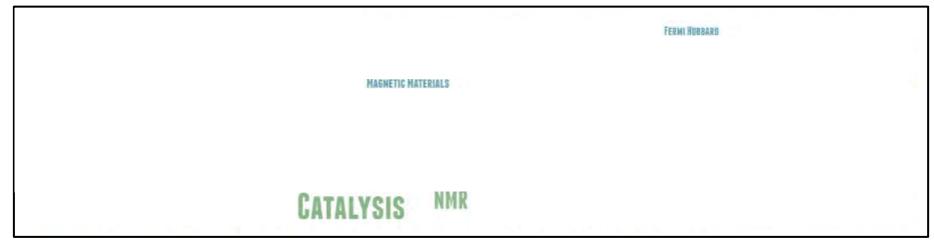

## Will quantum computing deliver on its promises?

### There is a rich application space for quantum computers...

... but current industry roadmaps are targeting ≤ 1,000 logical qubits and leave many applications out of reach.

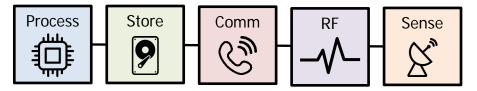

### Quantum computing has a data movement problem

## Lessons learned from 65 years of transistor scaling

Diverse technologies enable high-performance with specialized capabilities, and small chips yield better than large chips

"best junction for the function"

Parallel architecture unlocks the highest performance

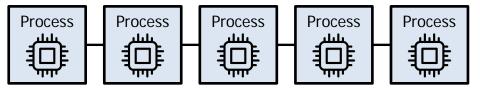

example: Frontier Supercomputer (2022)

### Data movement drives scalability

## How quantum computing is approaching qubit scaling today

Combine as many qubits as possible in a module, and as many modules as possible in a system

"best bet on the qubit for all functions"

Build the largest system possible

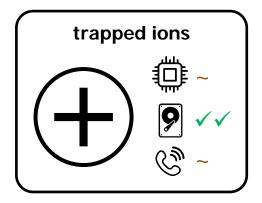

example: IBM Blue Jay (planned for 2033)

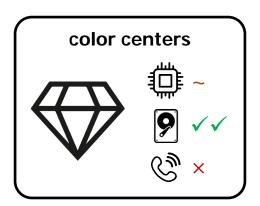

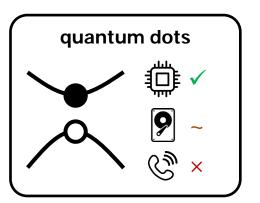

**Qubit physics dictates scalability** 

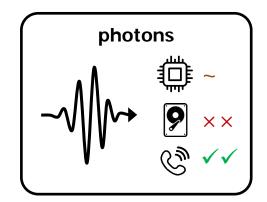

## Implications of homogeneous architectures

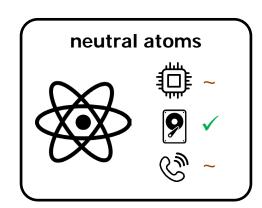

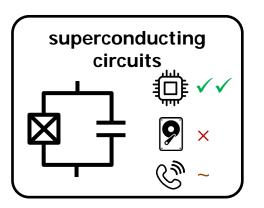

No qubit is ideal for all functions

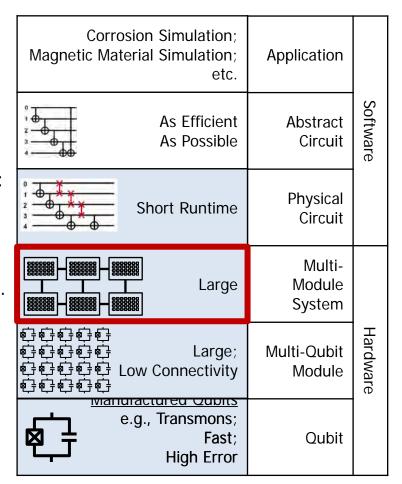

## Prediction – quantum computers in 2035

	Application	Corrosion Simulation; Magnetic Material Simulation; etc.		
Software	Abstract Circuit	As Efficient As Possible		
	Physical Circuit	Long Runtime		
	Multi- Module System	Small		
Hardware	Multi-Qubit Module	Small; $\bigotimes$ $\bigotimes$ $\bigotimes$ $\bigotimes$ High Connectivity $\bigotimes$ $\bigotimes$ $\bigotimes$		
	Qubit	e.g., Neutral Atoms; Slow; Low Error		

Systems with >>1,000 logical qubits will be: prohibitively expensive to <u>run</u>,

or,

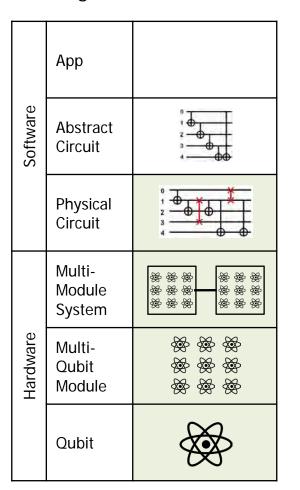

prohibitively expensive to build.

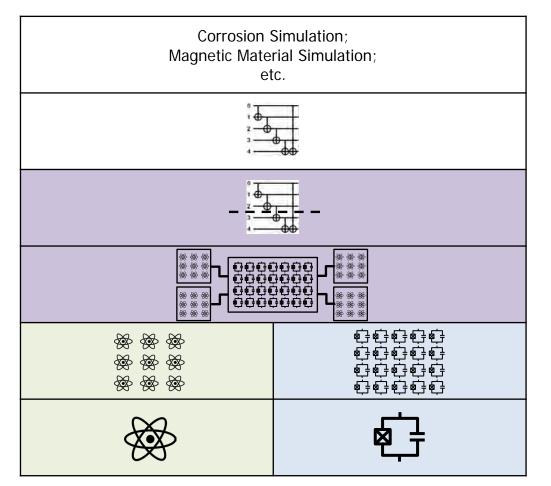

### What if we could have the best of both worlds?

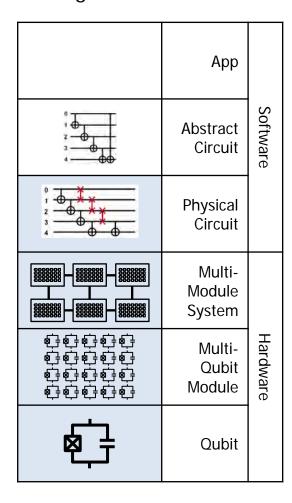

### Homogeneous Architecture

### **Heterogeneous Architecture**

### Homogeneous Architecture

## What if we could have the best of <u>all</u> worlds?

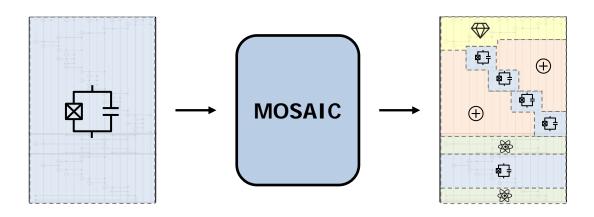

### **Heterogeneous Architecture**

	Арр			Saalahility ta	out of roach	annliaation			Арр	
Software	Abstract Circuit		Scalability to out-of-reach applications			Abstract Circuit	Software			
	Physical Circuit		Software optim	nization across <i>in</i>	nterfaces using	heterogeneous (	qubit resources		Physical Circuit	
	Multi- Module System	ı	HARQ  Hardware development of <i>interconnects</i> between heterogeneous qubit platforms		Multi- Module System					
Hardware	Multi- Qubit Module		Freedor	n from the co	onstraints of	each qubit p	latform		Multi- Qubit Module	Hardware
	Qubit	Quantum Dots	Trapped Ions	Color Centers	Neutral Atoms	Transmons	Photons	Future Qubits	Qubit	

### Heterogeneous architecture opens a new horizon for quantum computing

TA1
Multi-qubit Optimized Software Architecture
through Interconnected Compilation (MOSAIC)

### **MOSAIC Hypothesis**

Diversity of qubit parameters reduces resources for heterogeneous circuit compilations compared to homogeneous compilations

TA2
Quantum Shared Backbone (QSB)

### **QSB** Hypothesis

The advent of high-quality integration platforms enables quantum interconnects to approach the performance of intra-module operations

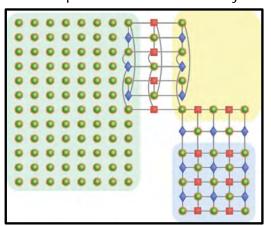

## How do qubit species come together?

## TA1: MOSAIC What could <u>interfaces</u> look like?

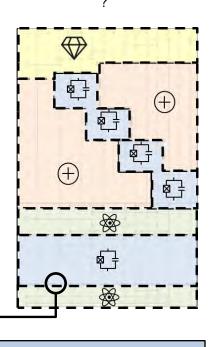

#### Homogeneous Example:

Quera teleportation scheme between qLPDC and surface code patches of neutral atom system

Xu et al. Nat. Phys. (2024)

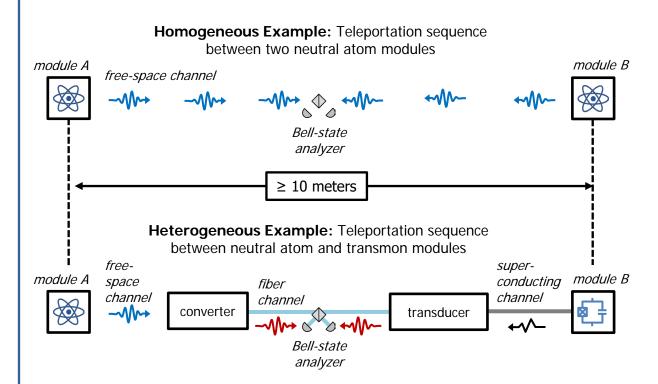

### **Heterogeneous Example:**

### **Heterogeneous Interface**

<u>Physical circuit layout</u> that maps quantum information between one logical qubit to another logical qubit of a different species

## TA2: QSB What could interconnects look like?

### **Heterogeneous Interconnect**

<u>Hardware component assembly</u> that transfers the quantum state of one <u>physical qubit</u> to another <u>physical qubit</u> of a different species

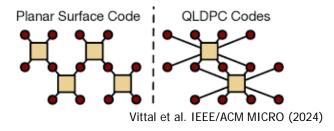

## Technical Challenges

### TA1

### **Challenges for interfaces**

How to distribute operations between:

qubits with dissimilar error correction codes?

qubits with dissimilar connectivity?

qubits with dissimilar clock speed?

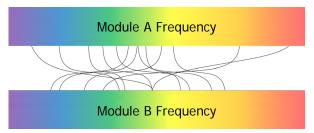

Will interfaces be manageable?
Which applications are amenable to heterogeneous architecture?
What is the "overhead"?

### TA<sub>2</sub>

### **Challenges for interconnects**

How to develop interconnects that are:

interoperable across operating frequencies and formats?

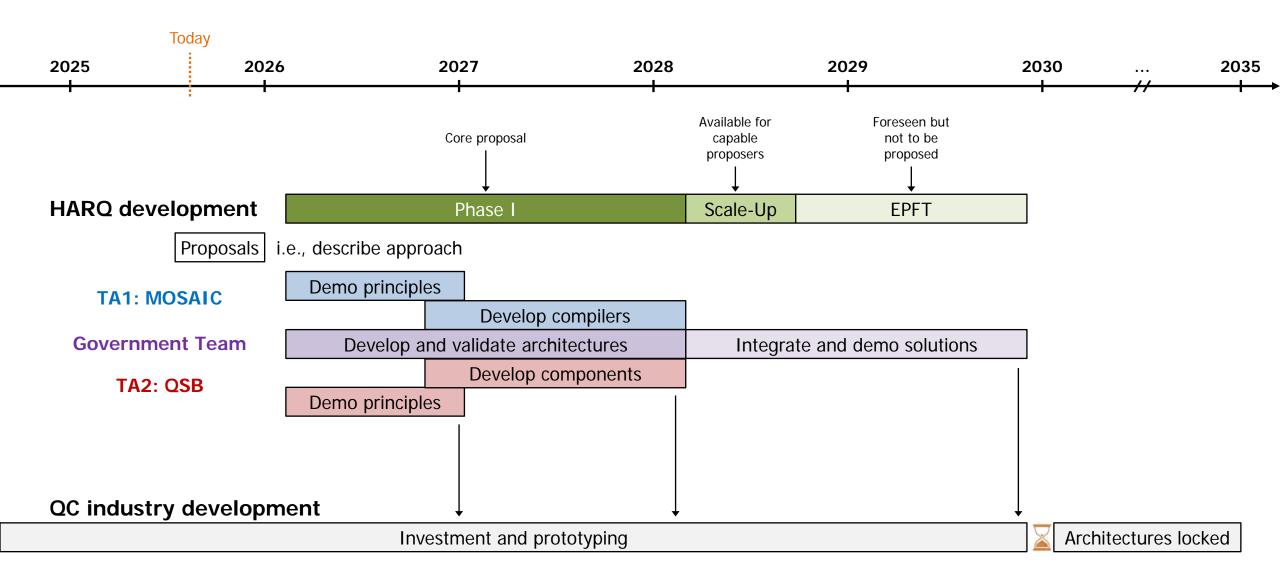

low noise or tolerant to noise?

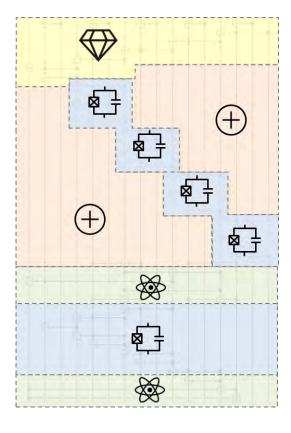

low loss or tolerant to loss?

Will high rates and fidelities be achievable?
Which qubit species are amenable to heterogeneous architecture?
What is the "overhead"?

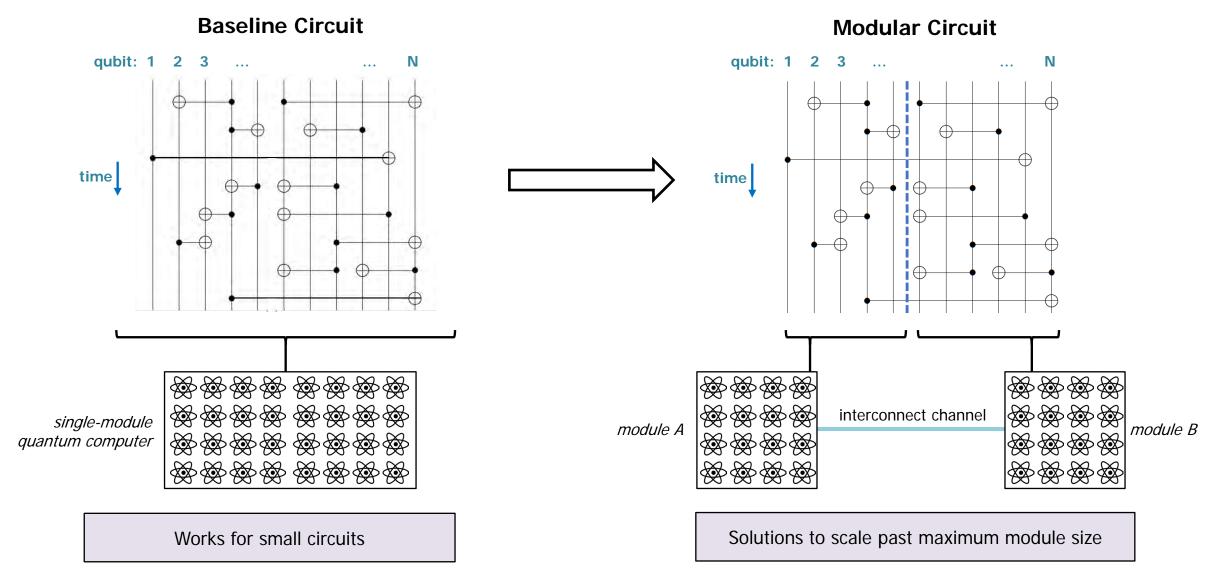

TA1: Multi-qubit Optimized Software Architecture through Interconnected Compilation (MOSAIC)

		Арр	Coolebility to out of money andications	
Software	Software	Abstract Circuit	Scalability to out-of-reach applications	
		Physical Circuit	TA1 MOSAIC: Software optimization using heterogeneous qubit resources	
		Multi- Module Systems	TA2 QSB: Hardware interconnectivity between heterogeneous qubit platforms	
	Hardware	Multi- Qubit Modules	Freedom from the constraints of each qubit platform	
		Qubits	× ⊕ ♥ ♥ ₱ · ↑ ?	

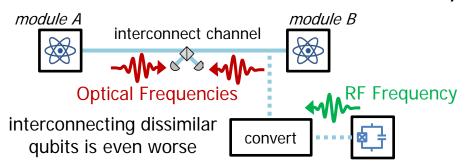

## Modular approaches to scalable quantum computing

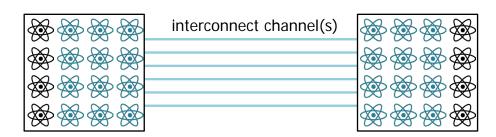

## Hardware weaknesses constrain the software design space

### **Interconnects are Slow, Low-Fidelity, and Cost Many Qubits**

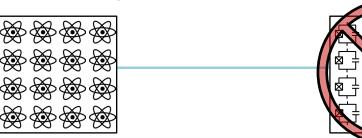

### Impact on Today's Quantum Software Architecture

Minimize Circuit Partitioning

mostly intramodule operations sporadic intermodule operations

mostly intramodule operations Compile to One Hardware Platform

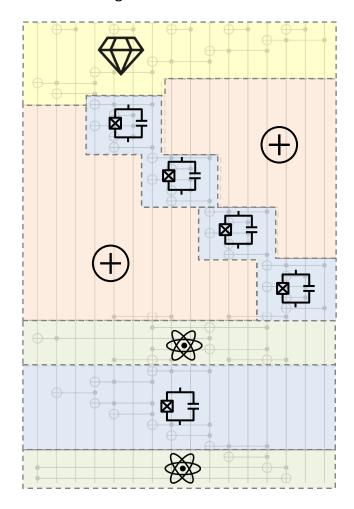

### MOSAIC – exploring how to compile for communication AND qubit specialization

## **MOSAIC Input MOSAIC Technical Approaches** Abstract circuit for Government-Methodology and compiler tools to optimize defined application resources across diverse qubit resources qubit: 1 2 3 **Example:** idle qubits: compile as trapped ions time dense gates: compile as transmons long-range gates: compile as neutral atoms

### **MOSAIC Output**

Physical circuit compiled in heterogeneous architecture

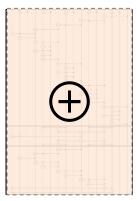

### MOSAIC – exploring how to compile for communication AND qubit specialization

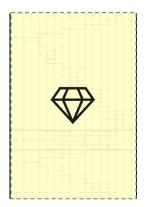

### **Homogeneous Reference Resource Estimates**

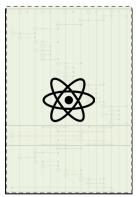

Quantum Dots # qubits = N<sub>1</sub> runtime = T<sub>1</sub>

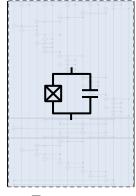

Trapped Ions # qubits =  $N_2$  runtime =  $T_2$ 

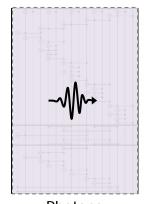

Color Centers # qubits = N<sub>3</sub> runtime = T<sub>3</sub>

Neutral Atoms # qubits =  $N_4$  runtime =  $T_4$ 

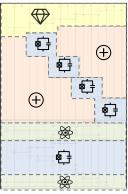

Transmons # qubits =  $N_5$  runtime =  $T_5$ 

Photons # qubits =  $N_6$ runtime =  $T_6$ 

### **MOSAIC** Resource Estimates

Heterogeneous # qubits = N runtime = T

MOSAIC Hypothesis: Diversity in qubit parameters (code rates, clock speeds, connectivity, lifetime, etc.) can enable 1,000x lower resources for heterogeneous circuit compilations compared to homogeneous compilations

Resource Efficiency Function of N and T to be provided by Government Team during the program

26

## TA1 Metrics – Heterogeneous Compilers

TA1	Compiler Metric
Resources	1,000x lower than homogeneous compilations
Circuit Size	1,000 logical qubits

- Performers will calculate resources by plugging the physical circuit output of their compiler tool into a
  Government provided efficiency function that will assign weights to the number of physical qubits and
  operations for each qubit species within the circuit
  - Compiler tool will optimize resource allocations through the same function
  - The resource metric will be demonstrated by comparing the optimal heterogeneous compilation to the homogeneous compilations that the tool produces when constrained to single qubit species.
- The Government Team will benchmark the compiler tool on standardized reference circuits
- Performers must deliver the tool with sufficient documentation so that the Government Team can use and modify the tool to independently apply the optimization framework.

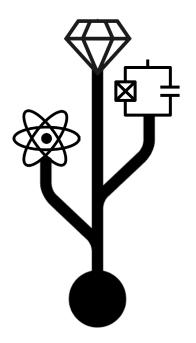

### TA1 Metrics - Circuit Size

TA1	Compiler Metric
Resources	1,000x lower than homogeneous compilations
Circuit Size	1,000 logical qubits

- In Year 1, TA1 compilers will be benchmarked on small reference circuits,<10 logical qubits, provided by the Government Team
- In Year 2, the compilers tool must be extended to be capable of compiling circuits containing at least 1,000 logical qubits.
- Proposals will define initial optimization frameworks and a progression of theory, analysis, and software development efforts to develop the compiler tool
  - Narrative proposal: initial framework, interfaces, and compiler approach
  - Oral proposal: technical plan

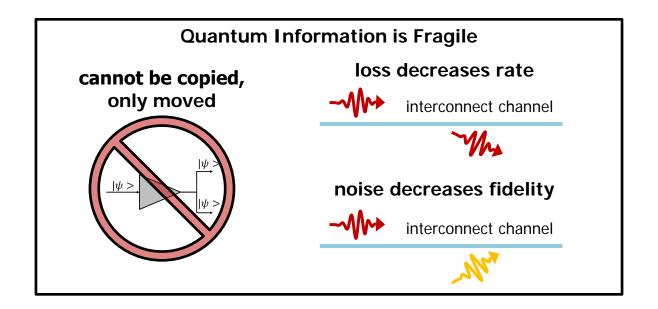

TA2: Quantum Shared Backbone (QSB)

	Арр	
Software	Abstract Circuit	Scalability to out-of-reach applications
	Physical Circuit	MOSAIC: Software optimization using heterogeneous qubit resources
	Multi- Module Systems	QSB: Hardware interconnectivity between heterogeneous qubit platforms
Hardware	Module	,

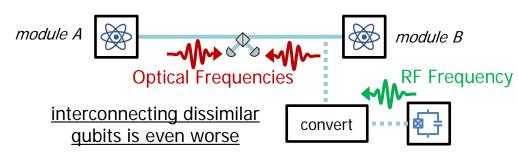

### The quantum communication problem

### **Impact on Today's Interconnects:**

teleportation-based transfer is <u>1,000x slower</u> and <u>100x lower fidelity</u> than intra-module operations

### Impact on Today's Quantum Hardware Architecture:

cannibalize processing qubits to boost interconnects, connect the <u>same qubits</u> on either end

30

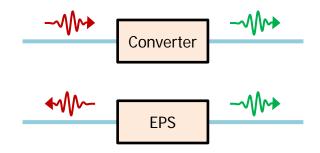

## TA2 Tracks – Building blocks for new modes of quantum communication

**A:** Quantum memories or repeaters

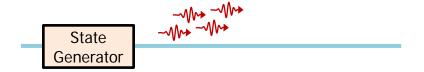

**B:** Optical frequency converters or entangled photon sources

**C:** Microwave-to-optical transducers

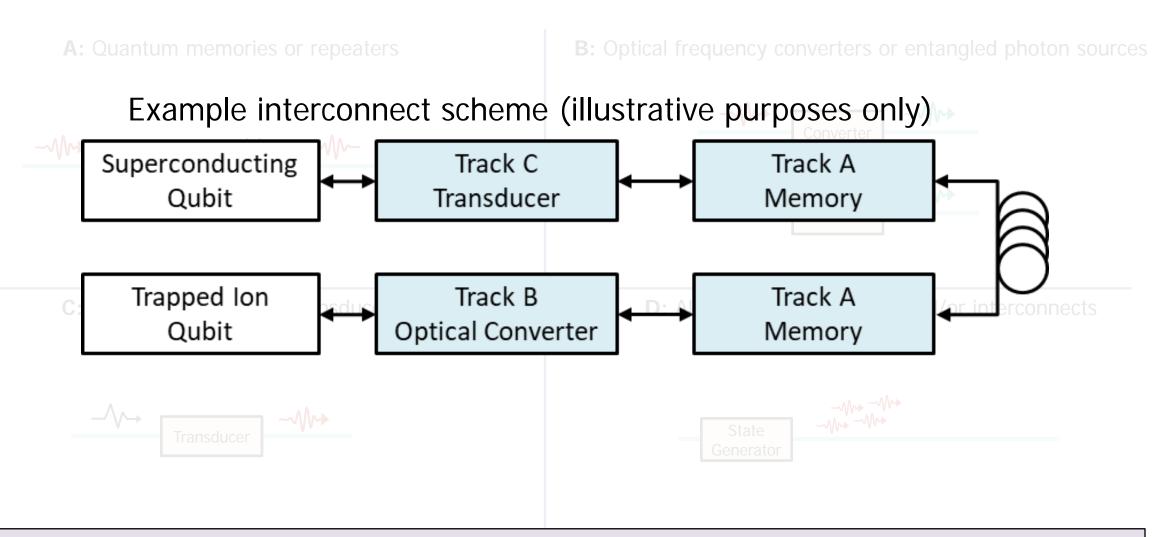

**D:** Alternative components and/or interconnects

### TA2 Tracks – Building blocks for new modes of quantum communication

QSB Hypothesis: Components built from high-quality integration platforms enable quantum interconnects to approach the performance of intra-module operations

TA2	Interconnect Metric	
State Transfer Rate	10 MHz	
State Transfer Fidelity	99.9%	

- Proposers must define component metrics that trace to the program interconnect metrics
- Interconnect metrics are to be met between a single physical qubit in module A and a single physical qubit in module B, for any pairwise combination of end-node qubit species A and B
- Interconnect metrics do not include the response time and infidelity of end-node qubit processes
- Interconnect model must account for at least 10-m-long physical communications channel
  - Model will be updated throughout program based on other findings across TA1 and TA2
- Proposals will define initial component designs and a progression of fabrication, assembly, and experimental tests to demonstrate the functionality
  - Narrative proposal: component and interconnect performance analysis
  - Oral proposal: technical plan

TA2	Interconnect Metric
State Transfer Rate	10 MHz
State Transfer Fidelity	99.9%

### **Baseline Performance**

- Specification that can be rigorously substantiated through analysis of the proposed design
- Interconnect model may assume state-of-theart performance for other components of the interconnect

### **Target Performance**

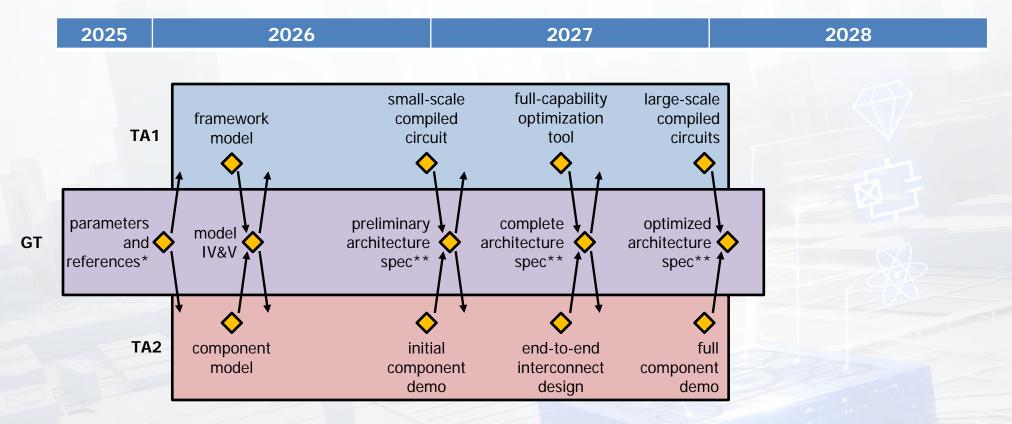

- Estimate of the theoretically achievable performance if all proposed innovations succeed
- Interconnect model may involve novel functionality or performance beyond performance for other components of the interconnect

## Technical Interchange and Government Team

## HARQ Technical Interchange Data Flow

QC: Quantum Computing TA: Technical Area

Qubit parameters, small-scale reference circuits < 100 qubits,

and large-scale reference circuits > 1,000 qubits

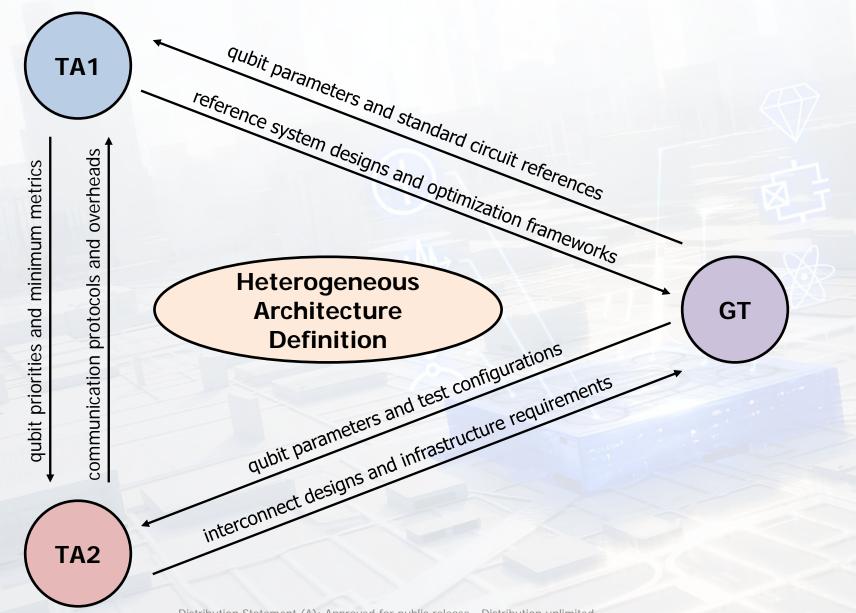

GT: Government Team

IV&V: Independent Verification and Validation

<sup>\*\*</sup> QC architecture design and technoeconomic analysis

#### **Quarterly Technical Interchange Meetings**

#### **TA1 Government Team Tasks**

- 1. **Definition of representative qubit parameters**: Analyze and extrapolate the state-of-the-art qubit parameters, including coherence time, gate speed, gate fidelity, code rate, etc.
- 2. Definition of reference circuits for quantum algorithm compiler tools: Identify small-scale and large-scale test circuits for evaluating the scalability of distributed heterogeneous QC vs distributed homogeneous QC.
- 3. Development of modeling and simulation tools to study distributed QC architectures: Analyze distributed QC architectures and interconnect topologies to understand achievable performance benefits
- **4. Independent operation of performer compiler tools:** Conduct independent verification and validation (IV&V) and test and evaluation (T&E); adapt and apply compilation optimization frameworks to DoD relevant applications
- 5. Heterogeneous QC architecture development and resource estimation: Refine concepts for heterogeneous architectures and provide feedback to DARPA and HARQ performers to guide their designs

#### TA2 Government Support Tasks

- **1. Interconnect component test and evaluation:** Conduct independent T&E of device components
- **2. End-to-end interconnect test design:** Develop testing protocols for operating heterogeneous interconnect with components developed by performers
- 3. Interconnect component development: Perform limited scope development of key components for interconnect demonstrations

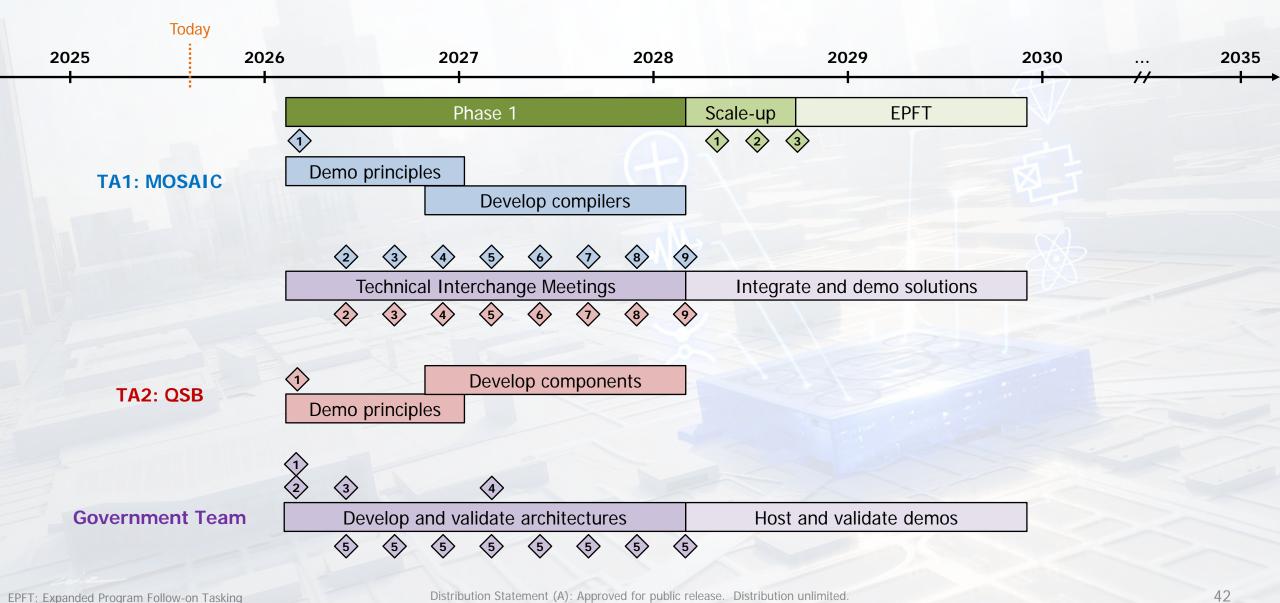

#### Program-Wide Government Support Tasks

- 1. Technoeconomic analysis for heterogeneous QC systems: Analyze the commercial and economic impacts if heterogeneous architectures do provide significant scaling advantages
- 2. Engagement with QC industry: Provide the QC industry with insight into the results of HARQ, and solicit feedback from the QC industry to guide the implementation of HARQ technology
- 3. Technical workshop management and participation for program-wide technical interchange: Conduct workshop-style program meetings to combine the findings of TA1 and TA2 to guide the development of heterogeneous architecture concepts.
- 4. Technical advising during regular project review meetings: Participate in quarterly technical review meetings with multiple performers and provide technical feedback to performers and DARPA.

#### Program Timeline and Milestones

#### TA1: MOSAIC Milestones

	Milestone	Month	Exit Criteria/Deliverable	Payment*		
1	Initial Optimization Framework and Kickoff	1	<ul> <li>Kickoff presentation slides</li> <li>Documentation of initial optimization framework in Government-specified format</li> <li>Executed ACAs with all other TA1 and TA2 performers</li> </ul>	\$50,000		
2	Initial Interface Layout	3	<ul> <li>Interface circuit layout for one combination of Government-defined qubit parameters</li> <li>Revision of optimization framework based on Government feedback and delivery of revised documentation</li> <li>Presentation delivered at virtual TIM that updates Government Team on detailed technical R&amp;D progress</li> <li>Presentation delivered at virtual TIM that updates a program-wide audience on the necessary optimization framework details for architecture development</li> </ul>	\$200,000		
3	Framework Revision	6	<ul> <li>Revision of optimization framework based on Government feedback and delivery of revised documentation</li> <li>Presentation delivered at in-person TIM that updates Government Team on detailed technical R&amp;D progress</li> <li>Presentation delivered at in-person TIM that updates a program-wide audience on the necessary optimization framework details for architecture development</li> <li>Summary of findings from coordination with TA2 and Government Team at in-person TIM</li> </ul>			
4	Intermediate Interface Layouts	9	<ul> <li>Interface circuit layout for all combinations of Government-defined qubit parameters</li> <li>Revision of optimization framework based on Government feedback and delivery of revised documentation</li> <li>Presentation delivered at virtual TIM that updates Government Team on detailed technical R&amp;D progress</li> <li>Presentation delivered at virtual TIM that updates a program-wide audience on the necessary optimization framework details for architecture development</li> </ul>	\$200,000		
5	Small-Circuit Demo	12	<ul> <li>Demonstration of optimization framework on small benchmark circuits</li> <li>Revision of optimization framework based on Government feedback and delivery of revised documentation</li> <li>Presentation delivered at in-person TIM that updates Government Team on detailed technical R&amp;D progress</li> <li>Presentation delivered at in-person TIM that updates a program-wide audience on the necessary optimization framework details for architecture development</li> <li>Summary of findings from coordination with TA2 and Government Team at in-person TIM</li> </ul>	\$275,000		

<sup>\*</sup> Payments listed for each milestone are not-to-exceed amounts.

#### TA1: MOSAIC Milestones

Milestone Month		Month	Exit Criteria/Deliverable	Payment*
6	Initial Compiler Tool Code	15	<ul> <li>Demonstration of functional compiler tool code</li> <li>Revision of optimization framework based on Government feedback and delivery of revised documentation</li> <li>Presentation delivered at virtual TIM that updates Government Team on detailed technical R&amp;D progress</li> <li>Presentation delivered at virtual TIM that updates a program-wide audience on the necessary optimization framework details for architecture development</li> </ul>	\$200,000
7	Version 1 Compiler	18	<ul> <li>Delivery of first version of the compiler tool code to Government team</li> <li>Revision of optimization framework based on Government feedback and delivery of revised documentation</li> <li>Presentation delivered at in-person TIM that updates Government Team on detailed technical R&amp;D progress</li> <li>Presentation delivered at in-person TIM that updates a program-wide audience on the necessary optimization framework details for architecture development</li> <li>Summary of findings from coordination with TA2 and Government Team at in-person TIM</li> </ul>	\$300,000
8	Large-Circuit Demo	21	<ul> <li>Software demonstration of optimization framework on Government-provided large benchmark circuit</li> <li>Revision of optimization framework based on Government feedback and delivery of revised documentation</li> <li>Presentation delivered at virtual TIM that updates Government Team on detailed technical R&amp;D progress</li> <li>Presentation delivered at virtual TIM that updates a program-wide audience on the necessary optimization framework details for architecture development</li> </ul>	\$200,000
9	Optimized Circuit and Resource Estimate	24	<ul> <li>Optimization results and detailed resource estimate for Government-provided large benchmark circuit</li> <li>Delivery of updated version of the compiler tool code to Government team</li> <li>Revision of optimization framework based on Government feedback and delivery of revised documentation</li> <li>Presentation delivered at in-person TIM that updates Government Team on detailed technical R&amp;D progress</li> <li>Presentation delivered at in-person TIM that updates a program-wide audience on the necessary optimization framework details for architecture development</li> <li>Prototype Delivery: proof-of-concept software tool and a proof-of-concept model</li> <li>Final Report (End of Phase Report)</li> </ul>	\$300,000

<sup>\*</sup> Payments listed for each milestone are not-to-exceed amounts.

#### TA2: QSB Milestones

	Milestone	Month	Exit Criteria/Deliverable	Payment*
1	Initial Designs and Kickoff	1	<ul> <li>Kickoff presentation slides</li> <li>Documentation of initial component-level and interconnect-level designs in Government-specified format</li> <li>Orders-placed for long-lead purchase items</li> <li>Executed ACAs with all other TA1 and TA2 performers</li> </ul>	\$250,000
2	Design Revision 1	3	<ul> <li>Revision of component design based on Government feedback and delivery of revised documentation</li> <li>Presentation delivered at virtual TIM that updates Government Team on detailed technical R&amp;D progress</li> <li>Presentation delivered at virtual TIM that updates a program-wide audience on the necessary component details for architecture development</li> </ul>	\$175,000
3	Initial Interconnect Models	6	<ul> <li>Interconnect designs for all combinations of Government-defined qubit parameters</li> <li>Revision of component design based on Government feedback and delivery of revised documentation</li> <li>Presentation delivered at in-person TIM that updates Government Team on detailed technical R&amp;D progress</li> <li>Presentation delivered at in-person TIM that updates a program-wide audience on the necessary component details for architecture development</li> <li>Summary of findings from coordination with TA1, other TA2 tracks, and Government Team at in-person TIM</li> </ul>	\$200,000
4	Draft Interface Control Document	9	<ul> <li>Draft interface control document</li> <li>Revision of component design based on Government feedback and delivery of revised documentation</li> <li>Presentation delivered at virtual TIM that updates Government Team on detailed technical R&amp;D progress</li> <li>Presentation delivered at virtual TIM that updates a program-wide audience on the necessary component details for architecture development</li> </ul>	\$175,000

#### TA2: QSB Milestones

Milestone Montl		Month	Exit Criteria/Deliverable	Payment*
5	Initial Testing	12	<ul> <li>Experimental test results demonstrating underlying component features</li> <li>Detailed analysis of interconnect-level performance and outlook based on underlying component feature performance</li> <li>Revision of component design based on Government feedback and delivery of revised documentation</li> <li>Presentation delivered at in-person TIM that updates Government Team on detailed technical R&amp;D progress</li> <li>Presentation delivered at in-person TIM that updates a program-wide audience on the necessary component details for architecture development</li> <li>Summary of findings from coordination with TA1, other TA2 tracks, and Government Team at in-person TIM</li> </ul>	\$200,000
6	Design Revision 2	15	<ul> <li>Revision of component design based on Government feedback and delivery of revised documentation</li> <li>Presentation delivered at virtual TIM that updates Government Team on detailed technical R&amp;D progress</li> <li>Presentation delivered at virtual TIM that updates a program-wide audience on the necessary component details for architecture development</li> </ul>	\$200,000
7	Final Interface Control Document	18	<ul> <li>Final interface control document</li> <li>Revision of component design based on Government feedback and delivery of revised documentation</li> <li>Presentation delivered at in-person TIM that updates Government Team on detailed technical R&amp;D progress</li> <li>Presentation delivered at in-person TIM that updates a program-wide audience on the necessary component details for architecture development</li> <li>Summary of findings from coordination with TA1, other TA2 tracks, and Government Team at in-person TIM</li> </ul>	\$300,000
8	Design Revision 3	21	<ul> <li>Revision of component design based on Government feedback and delivery of revised documentation</li> <li>Presentation delivered at virtual TIM that updates Government Team on detailed technical R&amp;D progress</li> <li>Presentation delivered at virtual TIM that updates a program-wide audience on the necessary component details for architecture development</li> </ul>	\$200,000

<sup>\*</sup> Payments listed for each milestone are not-to-exceed amounts.

#### TA2: QSB Milestones

	Milestone Month		Exit Criteria/Deliverable	Payment*
9	Full-Function Testing	24	<ul> <li>Experimental demonstration of full component functionality</li> <li>Optimized interconnect designs, and detailed analysis of interconnect performance and future outlook</li> <li>Delivery of functional component to Government team</li> <li>Revision of component design based on Government feedback and delivery of revised documentation</li> <li>Presentation delivered at in-person TIM that updates Government Team on detailed technical R&amp;D progress</li> <li>Presentation delivered at in-person TIM that updates a program-wide audience on the necessary component details for architecture development</li> <li>Prototype Delivery: physical proof-of-concept device.</li> <li>Final Report (End of Phase Report)</li> </ul>	\$300,000

#### Government Team Milestones

	Government Furnished Information	Month	Deliverable
1	Parameters	1	Representative parameters of qubit hardware, error correction codes, and interface parameters to guide TA1 and TA2 development
2	TA1 Optimization Function	1	Formula to convert resources calculated by TA1 compiler into efficiency figure of merit
3	Small Benchmark Circuits	3	Representative small (<10 logical qubits) benchmark circuits to run TA1 framework
4	Large Benchmark Circuit	12	Representative large (>1,000 logical qubits) benchmark circuit to run TA1 framework
5	Architectural Specifications	TBD	System co-design information will be provided up to quarterly to guide TA1 and TA2 redesigns

Represents milestones provided to performers for HARQ

#### 9-month Scale-Up Period

- Based on technical results achieved as early as month 12 of Phase 1, DARPA may pursue exercise of one or more performers' Scale-Up Periods through a modification to the Agreement.
- During the 9-month Scale-Up Period, performers are expected to **integrate their capabilities through formal agreements between each other and pursue hardware/software co-design work** towards an end-to-end interconnect demonstration, for a potential Expanded Program Follow-On Tasking (EPFT)
- DARPA requests that <u>proposers capable of the Scale-Up Task</u> include the <u>optional</u> 9-month Scale-Up Period in their proposal to facilitate a smooth transition to the EPFT

Milestone		Month	Exit Criteria/Deliverable	Payment*
1	Team Integration	3	Establish an optimized team composition required for end-to-end interconnect demonstration concepts	\$150,000
2	CUI Compliance Readiness	6	Establish CUI-compliant systems and processes	\$200,000
3	EPFT Plan	9	<ul> <li>Develop a test plan for an end-to-end interconnect demonstration</li> <li>Develop a Task Description Document and Cost Proposal for an end-to-end interconnect demonstration</li> <li>Develop an initial commercialization plan for HARQ technology</li> </ul>	\$300,000

<sup>\*</sup> Payments listed for each milestone are not-to-exceed amounts.

#### Expanded Program Follow-On Tasking (EPFT)

- Separate from the 24-month Phase 1 and 9-month Scale-Up Period, DARPA may, at its sole discretion, negotiate and incorporate EPFT with a period of performance ranging from 12–24 months
- EPFT may include significantly expanded scope, integration of new tasks, or broader implementation of capabilities demonstrated under the Base Effort.
- EPFT will only be incorporated through mutual agreement and a modification to the Agreement establishing its scope, milestones, and funding. The decision to incorporate EPFT will be based on the technical results of Phase 1, Scale-Up Period, mission priorities, and availability of funds.

#### **Acquisition Strategy**

#### Abstracts with virtual Q&A meeting

- Abstracts are required to submit a full proposal
- Virtual 30-minute Q&A meetings will be held from September 4–17, 2025
- During the Q&A meeting, the Government will ask the proposers clarifying questions about their abstract

#### Abstract Response Letters

- DARPA will respond to all abstracts with a statement as to whether DARPA:
  - (1) Recommends the proposer submit a full proposal or,
  - (2) Does not recommend the proposer submit a full proposal with a rationale for this decision
  - Regardless of DARPA's response to an abstract, proposers may submit a full proposal

#### Notification of Intent to Propose

- DARPA requests that proposers provide a notification of their intent to propose no later than October 1, 2025
- Submit your notification by email to <a href="mailto:HARQ@darpa.mil">HARQ@darpa.mil</a>

#### Proposals with virtual Oral Presentation

- Proposals and Oral Presentation slides are due no later than October 14, 2025
- Virtual 45-minute Oral Presentations with 45-minute Q&A sessions will be held from October 22 November 4, 2025

#### Other Transaction (OT) Agreement Negotiation

After the Oral Presentations, the Government will select proposers to enter negotiations for an OT for Prototype agreement under 10 U.S.C. § 4022

#### Associate Performer Agreement (APA) Expectation

- Coordination between TA1 and TA2 is critical for the HARQ program's success
- All HARQ performers will be required to sign APAs with all other performers within 30 days of OT award

DARPA-PS 25-31

#### ATTACHMENT K

#### ASSOCIATE PERFORMER AGREEMENTS

It is recognized that the success of the Heterogeneous Architectures for Quantum (HARQ) research effort depends in part upon the open exchange of information between the various performers involved in the effort. Therefore, any resultant award instrument stemming from this Program Solicitation will include a term/condition classifying performers as "Associate Performers" and requiring them to enter into an Associate Performer Agreement with all other HARQ performers, with each performer then assuming the responsibilities of an Associate Performer. The paragraphs below outline the general verbiage pertaining to Associate Performer Agreements proposers can expect in a resultant HARQ award.

#### Dates/Time: All Times are Eastern Time Zone (ET)

- Abstract Due Date: August 28, 2025, at 1:00 p.m.
- Abstract Virtual Q&A Dates: September 4–17, 2025
- Notification of Intent to Propose: October 1, 2025, at 5:00 p.m.
- Question Submittal Closed: October 1, 2025, at 5:00 p.m.
- Proposal Due Date: October 14, 2025, at 4:00 p.m.
- Virtual Oral Presentation Dates: October 22 November 4, 2025
- Estimated Period of Performance Start: February 1, 2026

Questions: HARQ@darpa.mil

#### **Contracting Overview**

Nestor GomezBello, Contracting Officer DARPA Contracts Management Office

#### Proposers Day Disclaimer

The purpose of Proposers Day is to make general information available to potential proposers to clarify program goals/objectives and proposal preparation instructions.

#### **However:**

- ➤ The information/instructions in the PS take precedence over any other source of information to include proposers day.
- > Proposals will be evaluated in accordance with the instructions provided in the PS
- ➤ Any response provided by the Government in the Q&A session that is different than what is provided in the PS will be made formal by an amendment to the PS
- Only a duly authorized Contracting Officer may obligate the Government

#### HARQ PS Overview

- The HARQ PS allows for a variety of technical solutions:
  - The PS defines the problem set, the proposer defines the solution
- Types of Instruments that may be awarded:
  - Phase 1 TA1 and TA2: Other Transaction for Prototype Agreements under 10 U.S.C. 4022
- DARPA Scientific Review Process
  - Proposals are evaluated on individual merit and relevance as it relates to the stated research goals/objectives rather than against one another
  - Selections will be made to proposers whose proposals are determined to be most advantageous to the Government,
     all factors considered, including potential contributions to research program and availability of funding
  - Evaluation Criteria for each TA are in Section II of the PS
- Government may select for negotiation all, some, one, or none of the proposals received

#### HARQ Program Structure

- HARQ is a single-phase 24-months program;
- Phase 1 will be executed in two separate but aligned technical areas (TA1 and TA2)
- Technical Area 1:
  - Phase 1 (Base) 24-month period of performance
  - Include the deliverable of one compiler prototype
- Technical Area 2:
  - Phase 1 (Base) 24-month period of performance
  - Include the deliverable of one component prototype
- A single abstract and proposal shall not address both technical areas. However, proposers may submit multiple separate abstracts and proposals, each addressing a single Technical Area
- Both TAs will run concurrently during Phase 1.
- Associate Performer Agreements (ACAs) among all HARQ performers must be executed within 30-days of award.

Phase 1 has a potential Scale-Up Period (9-months).

After the Scale-Up Period, there is potential for Expanded Program Follow-On Tasking (EPFT) i.e. Additional Task. (estimated 12–24-months)

- Team Integration is required
- EPFT proposal is a deliverable of the Scale-Up Period
- Modification to the Other Transaction for Prototype Award

#### **Proposer Eligibility Considerations**

- Foreign participants/resources may participate to the extent allowed by applicable Security Regulations, Export Control Laws, Non-Disclosure Agreements, and other governing statutes applicable under the circumstances.
- To ensure fair competition across the ecosystem, UARCs and FFRDCs (including National Labs) are prohibited from proposing in any capacity, whether as a Prime, Subcontractor, or Consultant.
- UARCs and FFRDCs interested in participating in HARQ should contact the Agency Point of Contact (POC) listed in the Overview section of the solicitation prior to the proposal (or abstract) due date to discuss **potential participation as part of the Government team**.
  - Please note that this paragraph supersedes the "Special Eligibility Considerations for Federally Funded Research and Development Centers (FFRDCs) and Government Entities" section found at Proposer Instructions and General Terms and Conditions.
- Organizational Conflicts of Interest (OCI):
  - Cannot simultaneously serve in advisory (i.e., SETA, IV&V, etc.) and performer role
  - Identify any conflicts
  - If any are identified, a mitigation plan must be included

#### **Proposer Eligibility Considerations**

#### Abstract are required to then submit a proposal

- The Government will reply by letter with one of the two below responses:
  - Encourage Full Proposal, and will provide feedback
  - Discourage Full Proposal, and will provide rationale
- Regardless of DARPA's response to an abstract, proposers may submit a full proposal
  - DARPA will review all full proposals submitted without regard to abstract recommendation/feedback

#### At the time of proposal submission:

- Proposers must have a Commercial and Government Entity (CAGE) code and a Unique Entity ID (UEI) registered in the System for Award Management (SAM) at SAM.gov.
- Foreign Proposer must have a valid US Bank account information in their SAM registration. This will avoid payment issues

#### At the time of contract award:

• Proposers must be registered in the prescribed Government invoicing system (Wide Area Work Flow (WAWF): https://wawf.eb.mil/xhtml/unauth/registration/notice.xhtml).

#### DARPA Fundamental Research Risk-Based Security Review Process

- Effective June 30, 2025, the DARPA Fundamental Research Risk-Based Security Review (FRRBS) will be conducted on all fundamental research awards executed through non-FAR-based instruments.
- FRRBS is an adaptive risk management security program designed to help protect the critical technology and performer
  intellectual property associated with DARPA's research projects by identifying the possible vectors of undue foreign
  influence. The DARPA team will create risk assessments of all proposed Senior/Key Personnel selected for negotiation of
  a fundamental research award. The DARPA risk assessment process will be conducted separately from the DARPA
  scientific review process and adjudicated prior to final award.
- For any proposal where fundamental research is included, proposers must submit the (1) Common Form for Biographical Sketch, and (2) Common Form for Current and Pending (Other) Support Information form for all covered individuals, in addition to the volumes and required attachments specified elsewhere in this Program Announcement. Both forms are available via the NSF website NSPM-33 Implementation Guidance Division of Institution and Award Support (BFA/DIAS) | NSF National Science Foundation Proposers must review the DARPA Fundamental Research Risk-Based Security Review Process detailed at Proposer Instructions: Other Transactions | DARPA

#### Intellectual Property (Data Rights)

- For HARQ Government will require either Unlimited Rights or Government Purpose Rights (GPR) to intellectual property (IP) developed under the program.
- Identify any items that would prohibit GPR
- Performers will provide regular updates to the government regarding:
  - Any changes to the overall IP posture that specifically deviate from GPR,
  - Additions to previously asserted or defined rights due to technology development,
  - Anticipated challenges to GPR.

This information will help inform the Expanded Program Follow-On Tasking (EPFT) and any subsequent IP negotiations.

- Evaluation Criterion, Potential Contribution & Relevance to DARPA Mission, includes the following consideration:
  - The proposed intellectual property restrictions (if any) will not significantly impact the government's ability to transition the technology.

#### Other Considerations

- HARQ is subject to the MTO CUI Guide (see Attachment L)
- HARQ is subject to an Associate Performer Agreement (ACA).
  - Regardless of TA, all HARQ performers will enter into ACAs within 30 days after Award
- Proposal submissions are anticipated to be unclassified or CUI.
  - However, should a proposer wish to submit classified information, an unclassified email must be sent to HARQ@darpa.mil notifying the MTO Program Security Officer.
- Fundamental Research:
  - If you believe an effort includes fundamental research, it is the **proposer's responsibility** to (1) identify the work; and (2) explain why it qualifies as fundamental; and (3) intended results of the research.
  - The government shall have the sole discretion to determine fundamental research designation
  - Given the nature of the program, both fundamental and non-fundamental research <u>may</u> prescribe publication requirements and other restrictions, as appropriate

#### Tips for a compliant proposal

- Submit the proposal on time!
  - Proposal due date and PS closing date are the same do not be late!
- Submit all required Attachments!
  - **READ** instructions contained within each Attachment!
  - All proposals must include a detailed list of key, observable Tasks in the Milestone Plan
  - All proposals must include a list of additional deliverables (if proposing in addition to PS requested)
- Submit all proposal Volumes
- Submit all Cost/Price supporting documentation
  - All proposals must include FPRA, FPRR, PBR, Suppliers Quotes, Paystubs, Basis Of Estimate, etc.
- Submit within the page limitations described in the PS!
  - Pages beyond the limit will not be reviewed

- Prior to Receipt of Proposals (Solicitation Phase): No restrictions, however Gov't (PM/PCO) shall not dictate solutions or transfer technology
  - Typically handled through the PS Q&A document.
- After Receipt of Proposals/Prior to Selections (Scientific Review Phase): Limited to Contracting Officer or PS Coordinator (with approval) to address clarifications requested by the review team
  - Proposal cannot be changed in response to clarification requests
- After Selection/Prior to Award (Negotiation Phase): Negotiations are conducted by the Contracting/Agreements Officer
  - PM and/or COR typically tasked with finalizing the TDD (with PI)
  - PM and/or COR typically involved in any technical discussions (i.e., partial selection discussions)
  - Pre-award costs will <u>not</u> be reimbursed unless a pre-award cost agreement is negotiated prior to award
- Informal Feedback Sessions (Post Selection): May be requested/provided once the selection(s) are made
  - If made on a timely basis (~2 wks. after letter), all requests will be accepted.

## **DARPAConnect Pop-Ups**

Full day events covering the breadth of your DARPA journey

- Engaging DARPA Program Managers
- Heilmeier Catechism: Understanding Effective DARPA Communication
- Understanding DARPA Announcements and Contract Vehicles
- Reviewing and Analyzing a DARPA Opportunity

- DARPA SBIR and STTR Program
- Understanding DARPA Security Resources
- Preparing Your DARPA Proposal
- Tying It All Together: Strategies for Success
- Opportunities for Networking

Seattle, WA November 2025

### **DARPAConnect Curriculum**

#### **Lessons Include:**

- DARPA 101: Introduction to DARPA
- DARPA Advanced Research Concepts Explained
- DARPA Award Vehicles and Solicitations
- DARPA SBIR/STTR Small Business Programs
- Introduction to DARPA Security
- Making the Most of a DARPA Proposers Day
- Opportunities to Work with DARPA
- Teaming Basics: Building an Effective Team

- The Heilmeier Catechism
- Tips for DARPA Proposal Success
- Understanding DARPA Broad Agency Announcements (BAAs)
- Understanding Intellectual Property
- Working with DARPA: Global Participation and Engagements
- Understanding Facilities Clearances
- Innovating Acquisition: Introduction to DARPA Other Transactions

**Program-Specific BAAs** Overview DARPA's Program-Specific BAAs are designed to solicit ideas that are tied to a specific area of new program ideas. This section will introduce you to the path through which a program is created, a sample program-specific BAA, and the average timeline to award Office-Wide BAAs The Path from Idea to Program Program-Specific BAAs It is important to understand the DARPA path from an idea to a program. PMs welcome the opportunity during early ideation to learn from potential performers about problems and solutions of interest, as outlined in the interactive graphic below. In fact, many DARPA Resources for Responding to programs are initially sparked by conversations with potential performers

## **Connect Corner**

Online sessions that offer a unique opportunity to learn about the mechanics of working with DARPA directly from DARPA presenters.

#### **Ask Me Anything**

An open forum where participants send in their questions and DARPA presenters answer them in a group setting

## One-on-One Coaching

30-minute private session where participants introduce their research interests and explore how they may fit at DARPA

#### **Office Hours**

10-minute sessions during which participants ask specific questions about working with DARPA in a private setting

DARPA's new monthly 30-minute quick-hit session that brings you the latest from DARPA's tech offices— key announcements, funding opportunities, upcoming events, and more.

## **Customized Support For Your DARPA Journey**

## Proposers Day Agenda

Start (ET)	Topic / Speaker			
10:30	WEBINAR CHECK-IN			
11:00	Welcome			
11:00	Neal Oza/MTO Technical SETA			
11:05	Introduction to MTO			
11.05	Whitney Mason, DARPA/MTO Office Director			
11:10	Program Overview			
11.10	Justin Cohen, DARPA/MTO Program Manager			
12:10	Contracting Overview			
12.10	Nestor GomezBello, DARPA/CMO Contracting Officer			
12:25	Introduction to DARPAConnect			
12.25	Sana Hoda Sood, Applied Research Institute			
12:30	BREAK			
13:30	Question & Answer Session			
15.50	Justin Cohen, DARPA/MTO Program Manager			
15:00	ADJOURN			

#### **Question & Answer Session**

Justin Cohen, Program Manager
DARPA Microsystems Technology Office
