

**DPA26BZ06-DV024**  
**New World Screwworm Networked Detection, Identification, and Surveillance**  
**System**  
**Frequently Asked Questions (FAQs)**

1. Must the pre-existing distributed prototype already have been field-tested specifically with New World Screwworm, or can field-demonstrated evidence of the underlying distributed arthropod detection, identification, and network architecture, combined with an NWS-specific adaptation and validation plan, satisfy the Phase I-equivalent feasibility requirement?

**A: It does not need to have been previously tested with New World Screwworm to satisfy Phase 1 requirements but should have been tested on insects.**

2. Will it be allowed to note in our proposal that we intend to (at least initially) obtain data abroad?

**A: This is allowed with full justification provided by the proposer.**

3. Will it be allowed in our proposal to budget a small appropriate amount to obtain data abroad?

**A: This is allowed with full justification provided by the proposer.**
